1. INTRODUCTION

This section should contain brief details about the module functionality, module type and the approach taken to testing the module. The individual tests should be documented in section 3. Special attention should be paid to boundary values within the business rules.
e.g. Assume If salary > 30,000 then ... is a business rule. Then we should test salary -1, 0, Null, 29,999.99, 30,000.00, 30,000.01 as possible values for the salary. The largest value that the salary field takes should also be tested.

2. Module details

2.1 Source code file name:

2.2 Module Version:

2.3 Authors name:

2.4 Executable file name:

3. TESTS

<u>Test No</u>	<u>Action</u>	<u>Expected result</u>	<u>Pass Y/N</u>
----------------	---------------	------------------------	-----------------
